SUMMARY

Information Technology Engineering student with hands-on experience designing and shipping full-stack and backend systems (Java/Spring Boot, Node.js, Python) and applying strong Data Structures, Algorithms, and OOP fundamentals to real problems. Comfortable owning a feature end-to-end — from API design and database schema to a working client — and works AI-natively, using LLM-based coding assistants daily to debug faster, prototype quicker, and iterate on architecture decisions. Background in data preprocessing and ML-driven analytics from a Business Analytics internship. Seeking a Software Development Engineer Intern role to build scalable, reliable systems on real-world data.

EXPERIENCE

- InTrainZ Technologies, Business Analytics / Data Science Intern** 12/2025 – 02/2026
Remote
- Owned data preprocessing, feature engineering, and model training end-to-end on real-world business datasets using Python, Pandas, and statistical techniques.
 - Built analytical solutions that translated raw data into actionable business insights, presenting findings directly to senior engineers.
 - Awarded a Letter of Recommendation for strong individual performance and reliability.

EDUCATION

- Bachelor of Technology in Information Technology, SSN College of Engineering - CGPA : 7.637/10.0** 08/2024 – Present
Chennai
- Higher Secondary Certificate, Srinivasa Vidhyalaya Matric Hr. Sec. School - 97.67%** 06/2021 – 05/2022
Udumalpet
- Secondary School Leaving Certificate,, Srinivasa Vidhyalaya Matric Hr.Sec.School - 91.8%** 06/2019 – 05/2020
Udumalpet

CERTIFICATES

- Privacy and Security in Online Social Media — ELITE**
- Introduction to Industry 4.0 and Industrial Internet of Things — ELITE**

PROJECTS

- ARH-DRS+ (AI-Powered Rural Health Diagnosis & Emergency Referral System)** 🔗, *Personal Project, In Progress* — Tech Stack: Java, Spring Boot, Spring Security, JWT, PostgreSQL, Hibernate/JPA, REST APIs, Swagger/OpenAPI
- Developed a secure healthcare backend with Patient, Doctor, Appointment, Medical Record, Emergency, and Dashboard modules using Spring Boot, PostgreSQL, and Hibernate/JPA.
 - Implemented JWT-based authentication, role-based REST APIs, centralized exception handling, request validation, and documented APIs using Swagger/OpenAPI.
 - Designed an AI-powered Clinical Triage Engine to analyze symptoms, compute risk scores, determine urgency levels, recommend specialists, and suggest possible medical conditions.
 - Built a Doctor Recommendation Engine and developed a Patient Dashboard API to aggregate appointments, medical records, emergency cases, and patient risk history.
- The Healer AI** 🔗, *Personal Project* — Original Concept - Tech Stack: Next.js, TypeScript, Firebase, OpenRouter API, Tailwind CSS
- Conceived the idea and independently designed and built a full-stack AI-powered mental wellness platform from the ground up — solo, from scratch, using AI coding tools to accelerate development — with Google authentication, personalized AI conversations, emotion tracking, journaling, mood analytics, and voice interaction.
 - Integrated Firebase Authentication and Firestore for real-time user management, persistent chat history, and personalized dashboards.
 - Shipped AI-driven features (emotional growth insights, life timeline visualization, reflection-letter generation) via OpenRouter APIs and deployed to production on Vercel.
- PhytoDiagnose** 🔗, *Smart Agriculture Analytics Platform* - Tech Stack: React.js • Python • Machine Learning • Power BI • k-NN • Statistical Analysis
- Built a platform to detect hydroponic plant nutrient deficiencies and fungal infections using ML and interactive dashboards.
 - Applied Weighted k-NN, ANOVA, and feature engineering to reach 86.1% classification accuracy on hydroponic plant images.
 - Built the React.js dashboard and Power BI reports used for predictive analytics and visualization.
- Mini Banking System, Team Project** - Tech Stack: Java • JavaFX • Hibernate ORM • MySQL • MVC + DAO Architecture
- Implemented MVC and DAO architecture, Hibernate ORM mapping, and transaction-safe database operations for a desktop banking application covering customer management and transaction processing.
